

Courses prepared in PowerPoint/Audio format are easier to learn from because they utilize both your visual and auditory senses. This type of presentation allows you to have a learning experience almost exactly as if it were presented in a classroom. You will see and hear the material explained just as you would in a classroom, with the added advantage that if you missed a point, it's easy to rewind the presentation and see and hear it again, as often as necessary for you to clearly understand what is being taught.
